$$F(x) = \frac{9}{5}(x - 273.15) + 32$$

Temperature increase in K: 2.10 K

Temperature increase in °F?

$$F(x) = \frac{9}{5}(x - 273.15) + 32$$

$$F(x) = \frac{9}{5}x - \frac{9}{5}(273.15) + 32$$

$$f(x) = mx + b$$

$$m = \frac{9}{5}$$

$$m = \frac{\Delta F}{\Delta x}$$

$$\Delta F = m\Delta x$$

$$\Delta F = \frac{9}{5}\Delta x$$

$$\Delta x = 2.10$$

$$\Delta F = \frac{9}{5}(2.10)$$

$$= \frac{18.90}{5}$$

$$= 3.78$$
