Let
r = pints of raspberries
b = pints of blackberries

Store A:
Raspberries: \$5.50/pint
Blackberries: \$3.00/pint
Total: \$37

Store B:
Raspberries: \$6.50/pint
Blackberries: \$8.00/pint
Total: \$66

b =?

Store A: $5.5r + 3b = 37$ ----- **eq1**
Store B: $6.5r + 8b = 66$ ----- **eq2**

eq2-eq1

$$(6.5r + 8b) - (5.5r + 3b) = 66 - 37$$
$$6.5r - 5.5r + 8b - 3b = 29$$
$$r + 5b = 29$$
$$r = 29 - 5b$$

In eq 1

$$5.5r + 3b = 37$$
$$5.5(29 - 5b) + 3b = 37$$
$$159.5 - 27.5b + 3b = 37$$
$$159.5 - 24.5b = 37$$
$$-24.5b = -122.5$$
$$b = 5$$
