Ice cream: 4 cups
Bananas: 2
Total calcium: 1114 mg
Calcium (1 ice cream): 276 mg
Calcium (1 banana)?

Calcium (4 ice cream) $= 4(276) = 1104$ mg

Total calcium $=$ Calcium (4 ice cream) $+$ Calcium (2 bananas)

$$\begin{aligned}\text{Calcium (2 bananas)} &= \text{Total calcium} - \text{Calcium (ice cream)} \\ &= 1114 - 1104 \\ &= 10 \text{ mg}\end{aligned}$$

$$\text{Calcium (1 banana)} = \frac{10}{2} = 5 \text{ mg}$$
