

First 25 people: $21 per person
Each additional person: $14
Total people: $n \geq 25$
Total charge: $f(n)$
Function $f(n)$?

Total charge = Charge for first 25 people + Charge for additional people

$$f(n) = 21(25) + 14(n - 25)$$
$$f(n) = 525 + 14n - 350$$
$$f(n) = 14n + 175$$
