Total points $= 70$

$x$= number of 1-point questions

$y$= number of 3-point questions

**equation?**

Points from the 1-point questions:

$\mathbf{(points\ per\ 1-point\ question)(number\ of\ 1-point\ questions)}$

$= 1(x) = x$

Points from the 3-point questions:

$\mathbf{(points\ per\ 3-point\ question)(number\ of\ 3-point\ questions)}$

$= 3(y) = 3y$

Total points $= 70$

$$x + 3y = 70$$
