1 gallon → 220 ft^2
Wall area $=$ w ft^2
Walls are painted: 2 times
Paint needed $=$ P gallons
Equation for P.

$$\text{Paint} = \frac{\textit{Total area}}{\textit{Area per gallon}}$$

Total area painted $= 2(w) = 2w$

Paint needed $= P = \frac{2w}{220}$

$$P = \frac{w}{110}$$
