Rate $= 5.7$ minutes per mile $= \frac{1}{5.7}$ miles per minute

Time $= m(x)$

Distance $= x$ miles

$m(x) = ?$

$$\text{Time} = \frac{\text{Distance}}{\text{rate}}$$

$$\text{rate} = \frac{\text{Distance}}{\text{time}}$$

$$m(x) = \frac{x}{\frac{1}{5.7}}$$

$$m(x) = 5.7x$$
